

# Ecoflex **Folding bellows material**

## The multifunctional innovation

As the latest innovation from our Material Development area, we are presenting Ecoflex – a folding bellows fabric that sets new standards in fire safety, sustainability and insulation.

Ecoflex helps to provide greater safety and sustainability in public transport. In combination with our new inner bellows, the thermal and acoustic insulation properties are also noteworthy – simultaneously optimizing noise levels and energy consumption. Ecoflex production takes place 100 percent in-house in the strong company network of the HÜBNER Group – from formulation to final production.

### Special features:

- Sustainable & halogen-free
- Excellent thermal and acoustic insulation properties
- Better CO2 footprint than conventional fabric blends
- Design flexibility with a larger range of colors
- Extremely low fire load

**Mobility** | Making mobility happen.
