

FX1000pro

High durability, low life-cycle costs

Durable, long-lasting and with low product life-cycle costs: HÜBNER's newly developed **FX1000pro** stands for the highest quality. While delivering the same high performance in operation as the previous model, it now achieves a significantly longer service life. A further plus point: 98 percent of the individual components used in the radial articulation can be re-used in case of reconditioning. Due to the system's low breakaway torque, less wear occurs on the vehicle's bogies and on the rails themselves. The result: Lower maintenance costs for rail vehicles and for transit system infrastructure.

Benefits of the new **FX1000pro**:

- Longer service life than the previous model
- Reduced wear resulting from low breakaway torque
- Corrosion-resistant steel construction: no rusting of the articulation bearing
- Fast availability of spare parts
- Modern eco-design: 98 percent of all metal components can be reused during reconditioning
- Perfect fit: identical interfaces and compatible dimensions for all known installation spaces
